PITCH DECK

Redefining Efficiency Through *Secure AI.*

We build domain-specific, private, and secure artificial intelligence infrastructure for enterprise.

01. THE PROBLEM

Generic AI Is Failing The Enterprise.

Enterprises in highly regulated sectors—like legal, healthcare, and government—are eager to adopt AI for efficiency but face significant roadblocks:

Data Sovereignty & Privacy

Sending proprietary data to third-party public models exposes organizations to massive compliance and security risks (GDPR, HIPAA).

Low Domain Accuracy

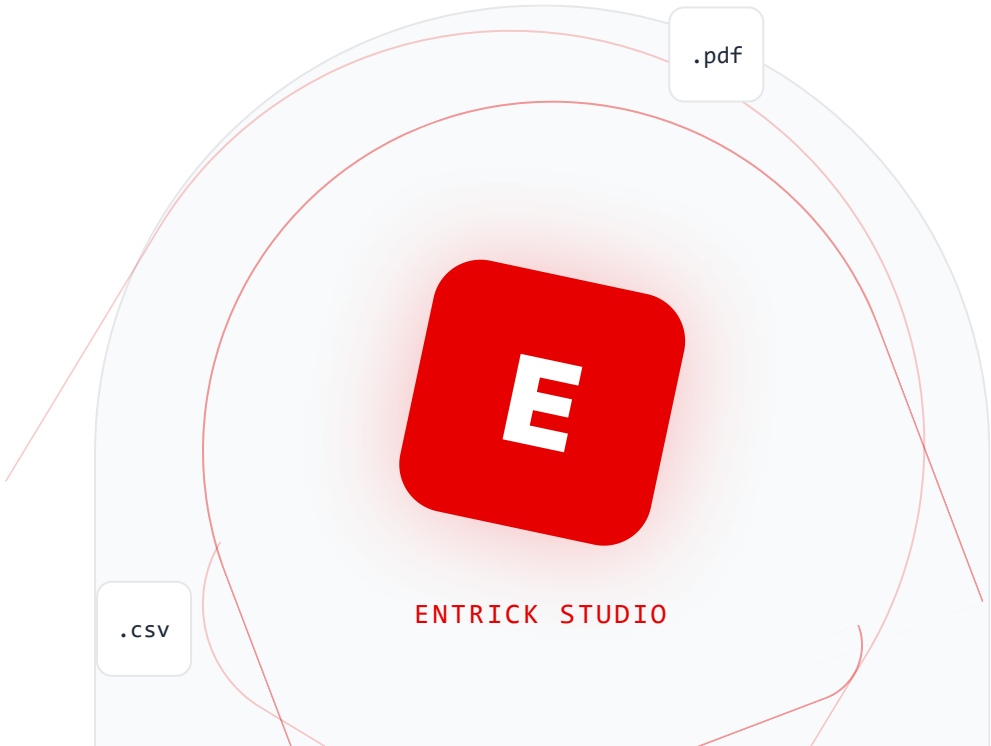
Foundational models hallucinate and fail at highly specific, technical, or legal jargon.

Infrastructure Costs

Running massive LLMs internally is computationally expensive and resource-prohibitive for most teams.

02. THE SOLUTION

Private, High-Performance Small Language Models (SLMs).



03. THE PRODUCT PIPELINE

Entrick Studio

This proprietary pipeline is how we turn your raw organizational data into an intelligent edge. We handle the complex lifecycle from unstructured data to audit-ready sovereign AI.

1

Agentic Data Curation

Automated extraction and structuring of highly technical domain data.

2 **Instruction Fine-Tuning**

Aligning models to your explicit corporate guardr

Get started

3 **Secure Deployment**

Implementation within your VPC or on-premise hardware.

04. TRACTION & VALIDATION

Proven Execution in Regulated Markets.

The Enterprise AI Market

Our Business Model

The immediate demand for compliance-driven, sector-specific Artificial Intelligence is exploding. Healthcare, Government, and Legal sectors cannot utilize generic API models, representing a massive untapped pipeline for sovereign AI deployment.

We operate on a premium B2B engagement model. Revenue is initially through upfront custom SLM engineering fees followed by recurring SaaS contracts for model maintenance, continuous fine-tuning, and infrastructure monitoring.

05. THE CORE TEAM

Built by Specialists.

Our leadership blends deep expertise in software engineering, machine learning pipelines, and strict cybersecurity protocols.
